Management

• Remote Intelligent Mirroring: mirrors selected ingress/egress traffic based on ACL, port, MAC address, or VLAN to a local or remote 8200zl/6600/6200yl/5400zl/3500 switch anywhere on the network
• RMON, XRMON, and sFlow v5: provide advanced monitoring and reporting capabilities for statistics, history, alarms, and events
• IEEE 802.1AB Link Layer Discovery Protocol (LLDP): automated device discovery protocol provides easy mapping by network management applications
• Uni-Directional Link Detection (UDLLD): monitors cable between two switches and shuts down the ports on both ends if the cable is broken turning the bi-directional link into uni-directional; this prevents network problems such as loops
• Management simplicity: provides ProCurve-common networking features and CLI implementation (common across ProCurve 8200zl/6600/6200yl/5400zl/3500 switches)
• Command authorization: leverages RADIUS to link a custom list of CLI commands to individual network administrator’s login; also provides an audit trail
• Friendly port names: allow assignment of descriptive names to ports
• Dual flash images: provides independent primary and secondary operating system files for backup while upgrading
• Multiple configuration files: can be stored to the flash image

Connectivity

• IPv6:
  • IPv6 host: enables switches to be managed and deployed at the IPv6 network’s edge
  • Dual stack (IPv4/IPv6): transitions from IPv4 to IPv6, supporting connectivity for both protocols
  • MLD snooping: forwards IPv6 multicast traffic to the appropriate interface
  • IPv6 ACL/QoS: supports ACL and QoS for IPv6 network traffic
  • IPv6 ready: switch hardware can support IPv6 routing, tunneling, and security-available when enabled via software updates in follow-on releases

• IEEE 802.3af Power over Ethernet (POE): provides up to 15.4 W per port to IEEE 802.3af-compliant PoE powered devices such as IP phones, wireless access points, and security cameras

• NEW IEEE 802.3at Power Over Ethernet Plus (PoE+): provides up to 30 W per port to IEEE 802.3 for PoE/PoE+ powered devices such as video IP phones, IEEE 802.11n wireless access points, and advanced pan/zoom/tilt security cameras

• Prestandard PoE support: detects and provides power to prestandard PoE devices; see list of supported devices in the product FAQs at www.procurve.com

• Jumbo frames: on Gigabit and 10-Gb ports, allow high-performance remote backup and disaster-recovery services

• Auto-MDIX: automatically adjusts for straight-through or crossover cables on all 10/100 and 10/100/1000 ports

Performance

• High-speed/capacity architecture: up to 153.6 Gbps crossbar switching fabric provides intra- and inter-module switching with up to 111.5 million pps throughput on the purpose-built ProVision ASICs

• Selectable queue configurations: increase performance by selecting the number of queues and associated memory buffering that best meet the requirements of your network applications
Resiliency and high availability

- **Virtual Router Redundancy Protocol (requires Premium License):** VRRP allows groups of two routers to dynamically back each other up to create highly available routed environments.

- **Server-to-switch distributed trunking:** allows a server to connect to two switches with one logical trunk that consists of multiple physical connections; enables load-balancing and increases resiliency.

- **IEEE 802.3ad Link Aggregation Control Protocol (LACP) and ProCurve trunking:** support up to 60 trunks, each with up to 8 links (ports) per trunk.

Layer 2 switching

- **IEEE 802.1ad Q-in-Q (requires Premium License):** increases the scalability of an Ethernet network by providing a hierarchical structure; connects multiple LANs on high-speed campus or metro network.

- **ProCurve switch meshing:** dynamically load-balances across multiple active redundant links to increase available aggregate bandwidth.

- **VLAN support and tagging:** supports the IEEE 802.1Q standard and 2,048 VLANs simultaneously.

- **IEEE 802.1v protocol VLANs:** isolate select non-IPv4 protocols automatically into their own VLANs.

- **GARP VLAN Registration Protocol:** allows automatic learning and dynamic assignment of VLANs.

Layer 3 services

- **UDP helper function:** allows UDP broadcasts to be directed across router interfaces to specific IP unicast or subnet broadcast addresses and prevents server spoofing for UDP services such as DHCP.

- **Loopback interface address:** defines an address in RIP and OSPF that can always be reachable, improving diagnostic capability.

Layer 3 routing

- **Static IP routing:** provides manually configured routing; includes ECMP capability.

- **RIP:** provides RIPv1 and RIPv2 routing.

- **OSPF (requires Premium License):** includes host-based ECMP to provide link redundancy/scalable bandwidth and NSSA.

Security

- **Multiple user authentication methods:**
  - **IEEE 802.1X users per port:** provides authentication of multiple IEEE 802.1X users per port; prevents user “piggybacking” on another user’s IEEE 802.1X authentication.
  - **Web-based authentication:** authenticates from Web browser for clients that do not support IEEE 802.1X supplicant; customized remediation can be processed on an external Web server.
  - **MAC-based authentication:** client is authenticated with the RADIUS server based on client’s MAC address.
  - **Concurrent IEEE 802.1X, Web, and MAC authentication schemes per port:** switch port will accept up to 32 sessions of IEEE 802.1X, Web, and MAC authentications.

- **Virus throttling:** detects traffic patterns typical of WORM-type viruses and either throttles or entirely prevents the virus from spreading across the routed VLANs or bridged interfaces, without requiring external appliances.
